EDUCATION

- Vellore Institute of Technology** Chennai, India
B.Tech in Computer Science and Engineering; CGPA: 8.7 Jul 2020 – May 2024

EXPERIENCE

- Air India Limited** Kochi, India
Software Engineer Aug 2024 – Present
 - Designed, developed, and owned cloud-hosted backend services and REST APIs using **Java/Spring Boot** and **Python**, following clean architecture and object-oriented design principles.
 - Built and scaled event-driven systems on **Azure (Service Bus, Functions)** processing **1M+ notifications/day**, ensuring idempotency, fault tolerance, and high availability.
 - Designed and optimized relational database schemas using **PostgreSQL (JSONB)**; reduced critical query latency from **7s to <50ms** via indexing, query refactoring, and in-memory caching.
 - Implemented unit and integration tests using **JUnit** with mocking; enforced quality via PR reviews, SonarQube checks, and CI pipelines.
 - Instrumented services with structured logging and metrics using **Grafana** and Azure monitoring tools, improving observability and reducing mean-time-to-resolution.
 - Applied secure coding practices including authentication/authorization checks and **OWASP Top 10** awareness for enterprise backend services.
 - Worked in an **Agile/Scrum** environment, participating in sprint planning, stand-ups, grooming, retrospectives, and cross-team design discussions.
 - Optimized cloud architecture and processing workflows, reducing operational costs from **Rs.40L/month to <Rs.10L/month**.
 - Awards:** Dream Team Award (Reliability & Cost Optimization), High Flyer Award, AI IMPACCT Champion (2024–2025).

PROJECTS

- ASP.NET Core Web API (Learning Project)**
 - Built RESTful APIs using **ASP.NET Core** and **C#**, implementing async controllers, model validation, and dependency injection.
 - Integrated relational database access, basic authentication, and API documentation using **Swagger/OpenAPI**.
 - Focused on clean code structure, logging, and testability to mirror enterprise web application standards.
- Scheduler and Notification Platform**
 - Developed a cloud-native scheduling engine triggering **400K+** daily executions via REST APIs and message queues.
 - Implemented idempotent workflows and retry strategies, reducing duplicate notifications by **20%**.
 - Emphasized maintainability, logging, and failure recovery for production workloads.
- Flight Disruption Management System**
 - Built backend services in **Python** with RESTful APIs and a **React.js** UI for backend integration.
 - Designed deterministic state transitions and structured data models to improve traceability and response consistency.
 - Deployed services on Azure with logging and monitoring for production readiness.

SKILLS

- Programming:** Java, C/C++, Python, SQL, JavaScript, HTML/CSS; working knowledge of **C#** and **.NET**
- Backend & APIs:** RESTful APIs, Spring Boot, FastAPI, ASP.NET Core (learning), MVC patterns, Event-Driven Architecture
- Databases:** PostgreSQL, MySQL, MongoDB, Redis (schema design, joins, indexing, query optimization)
- Cloud & DevOps:** Azure (Functions, Service Bus, App Hosting, Monitoring), AWS basics, CI/CD pipelines, Docker, Kubernetes
- Testing & Quality:** Unit Testing (JUnit; familiarity with xUnit/NUnit concepts), Mocking, Code Reviews, SonarQube
- Observability & Tools:** Grafana, Git, GitHub, Azure Pipelines, Postman
- CS Fundamentals:** OOP, Data Structures & Algorithms, Async Programming, Algorithmic Complexity
