PROFESSIONAL SUMMARY

Data-oriented Software Engineer with **1.4 years of professional experience** in the aviation domain, building scalable backend systems and analytics-ready data pipelines. Strong experience in **SQL, Python, ETL-style workflows, and event-driven data processing**, with a proven track record of ensuring data quality, meeting SLAs, and transforming high-volume operational data into actionable business insights.

EDUCATION

- Vellore Institute of Technology** Chennai, India
B.Tech in Computer Science and Engineering; CGPA: 8.7 July 2020 – May 2024

EXPERIENCE

- Air India Limited** Kochi, India
Software Engineer (Data & Platform Systems) August 2024 – Present
 - Multiple Excellence Awards (2024–2025)** — Recognized by delivery leaders and architects for reliability engineering, analytics-driven optimizations, and production incident ownership, including **Dream Team Award, High Flyer Award, and AI IMPACCT Champion**.
 - Designed and scaled data-driven notification platforms processing **~1M+ events/day**, enabling analytics on delivery success, latency, failures, and customer engagement.
 - Built and optimized **SQL-based analytical workflows** on operational datasets, reducing query latency from **~7s to <50ms** and enabling near real-time insights.
 - Developed **Python-based data utilities and services** for extraction, transformation, validation, and controlled access to production datasets for analytics and investigation use cases.
 - Owned event-driven data pipelines handling **~3,500+ flight events/day**, ensuring data accuracy, consistency, and SLA adherence across downstream systems.
 - Contributed to logical **data mart design** by structuring high-volume event data into analytics-ready formats consumed by reporting and monitoring dashboards.
 - Established data validation checks and monitoring metrics to detect schema drift, missing attributes, and volume anomalies, improving trustworthiness of analytics outputs used by business stakeholders.
 - Partnered with analytics and operations teams to define KPIs and success metrics, translating raw operational data into structured datasets and dashboards for performance monitoring and decision-making.
 - Optimized data processing architecture, reducing monthly operational costs from **Rs.40L to under Rs.10L** through efficient aggregation, pipeline consolidation, and channel optimization.

SELECTED PROJECTS

- Notification Analytics & Scheduling Platform:**
 - Designed ETL-style workflows for **100,000+ daily booking events** and **400,000+ scheduled executions**, supporting delivery analytics and SLA tracking.
 - Implemented idempotent processing and state-based deduplication, improving data correctness and reducing downstream inconsistencies by **~20%**.
- Flight Disruption Management (Conversational AI):**
 - Built backend services in **Python** to aggregate disruption signals, classify severity, and generate structured resolution data.
 - Designed deterministic state transitions across conversation stages, enabling traceable, analytics-friendly interaction data.

SKILLS

- Languages: Java, Python, SQL (PostgreSQL), JavaScript
- Data Engineering: ETL Pipelines, Data Modeling, Data Quality Checks, SLA Monitoring, Event-Driven Processing
- Databases: PostgreSQL (JSONB), MySQL, MongoDB, Redis
- Cloud Platforms: Azure (Service Bus, Event Hub, Functions, Databricks), AWS (S3, CloudWatch – working exposure), GCP (BigQuery – academic exposure)
- Visualization & BI: Analytics dashboards, KPI reporting (Tableau – foundational knowledge)
- Tools & DevOps: Git, Docker, Kubernetes, CI/CD, Grafana
